

Main Housing Drawing

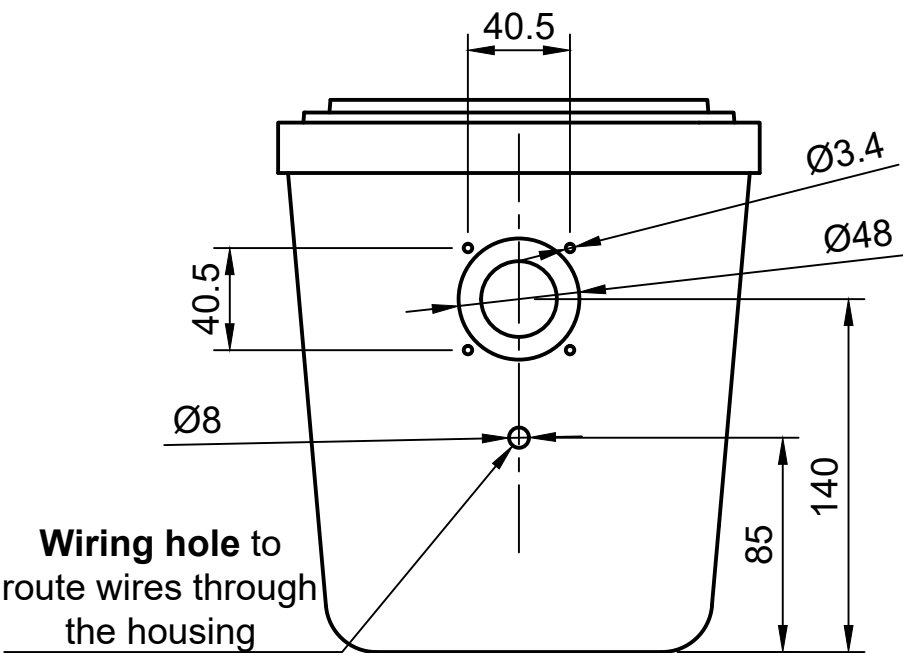

Container Requirements:

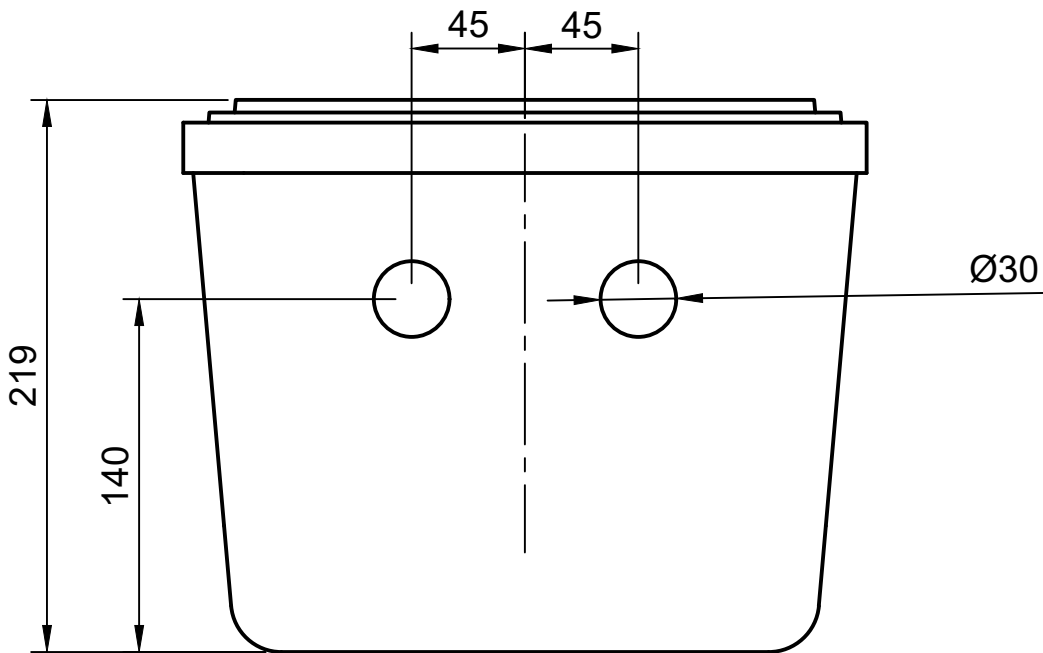

- Any container that is approximately 230 mm x 150 mm x 200 mm (length x breadth x height) will suffice.
- Polypropylene containers are recommended because they are less likely to shatter or break when making the holes.

Additional Notes:

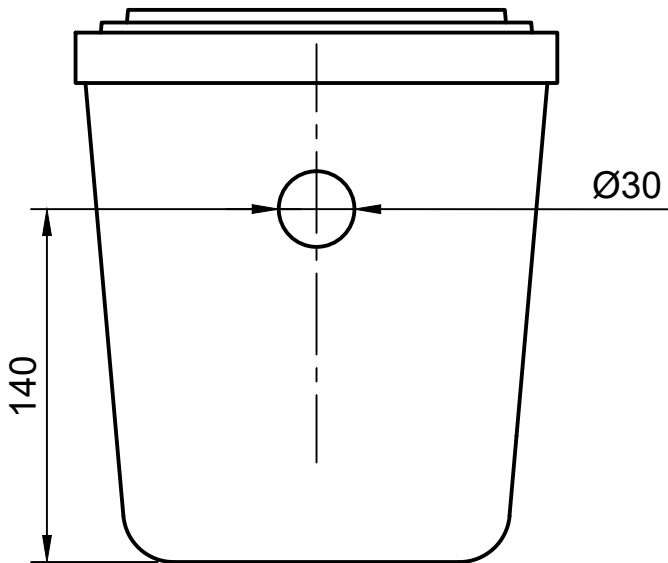

- All holes with 30 mm diameter are **ventilation holes**.
- The 48 mm diameter hole is for the 5V DC fan.
- All ventilation and fan holes must be at least 140 mm above the base of the container. They are to be positioned with respect to the vertical centerline of the container.
- The four 3.4 mm diameter holes in the left view are to be used with M3 screws and hex nuts to mount the fan.
